KNIFE CRIME IS ON THE RISE

If you want to be more prepared, here's how...

Workplace First Aid

First aid buyers — find out exactly what supplies you need for your workplace

This guide is designed to help you understand the essentials of workplace first aid, from assessing your specific needs to complying with legal requirements. By using this guide, you'll be able to assess the risks in your workplace and make informed decisions about the first aid supplies and training your business requires.

Don't let a lack of preparedness get the better of you. Without proper first aid provisions, you are putting yourself and anyone else you're responsible for at risk. If you're an employer, this also means you're breaking the law. Steroplast can help you put the proper precautions in place for peace of mind.

We specialise in developing health and safety risk-preventative measures that all kinds of businesses need to take. Whether you run an international operation or are a self-employed tree surgeon, we've worked with someone in your position before to supply all the workplace first aid you need to confidently carry on business.

Not what you're looking for?

Our range of **Advanced Life Support** products starts on page 66.

Find all the products mentioned on our online guide: The Definitive Guide to Workplace First Aid

Scan the QR code to directly access our first aid product selection and benefit from our expert advice and product insights, ensuring you get the most appropriate solutions for your workplace first aid requirements.

Complete the Workplace First Aid Assessment to find what you need

Pages
08-09

Pages
10-59

Pages
60-63

Step 1:

Start with a **Workplace First Aid Assessment**

Before browsing our product selection, start by completing the Workplace First Aid Assessment found on pages 8 & 9.

This will help you identify the specific risks present in your workplace to inform exactly which first aid supplies you need.

Make a list of the products in your assessment results before moving onto the next section.

Step 2:

Select the Right **First Aid Products**

After completing your assessment, you'll be ready to choose the most suitable first aid supplies for your workplace.

Using your assessment results, you can browse the product catalogue with confidence and select items that match your specific requirements, helping ensure your site is properly prepared.

Visit www.steroplast.co.uk or contact us directly to purchase your selected products.

Step 3:

Learn more through **Educational Resources**

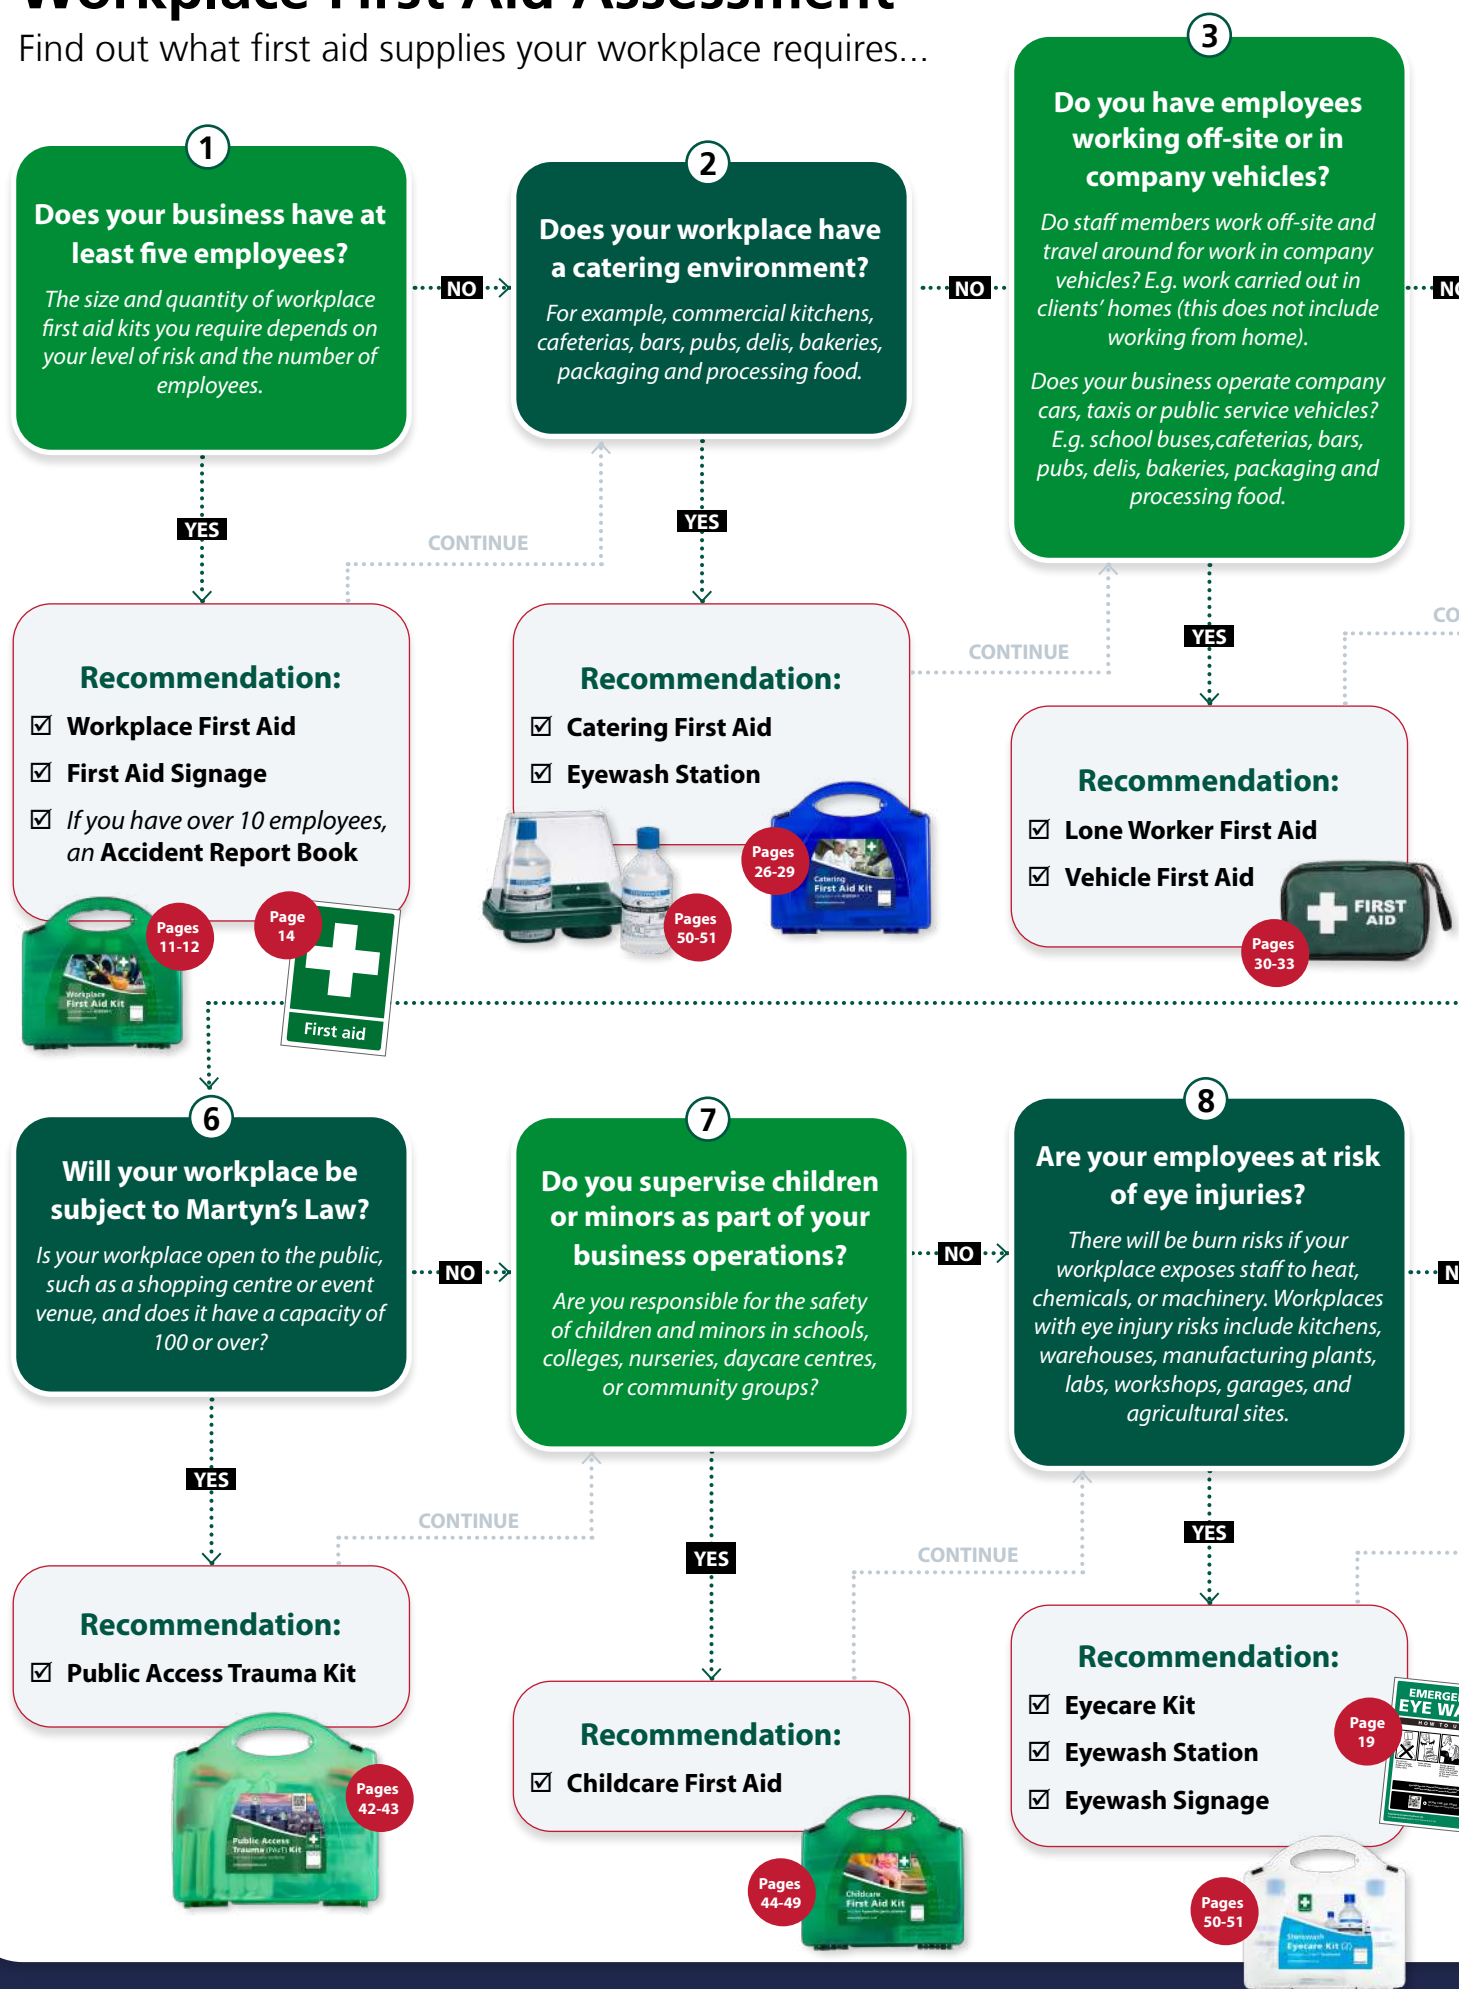

Once you've completed the assessment, move on to the Education Section, where you'll find valuable information to guide your decisions.

Learn about your legal responsibilities and ensure your business complies with UK health and safety regulations.

- Workplace-Specific Hazards

Workplace First Aid Assessment

Find out what first aid supplies your workplace requires...

Workplace First Aid

It is the **LAW** for employers to ensure that employees receive help immediately if they are ill or injured at work

Every business must have:

- A suitably stocked first aid kit
- An appointed person to take charge of first aid requirements
- A number of staff trained in first aid at work and there must always be a trained first aider on site
- Provide information for all employees informing them of first aid arrangements

How to choose the correct workplace first aid kit:

Using our selection chart below makes choosing the right first aid kit is now as easy as 1, 2, 3.

- 1 Is your work environment **LOW HAZARD** or **HIGH HAZARD**
- 2 How many employees there are in your workplace?
- 3 Which of the three sizes of kit you will need, e.g. **small**, **medium** or **large**

Number of significant areas in your workplace	Degree of hazard	Number of employees	Minimum requirements
A significant area is an individual floor or building. You should be able to reach a casualty within 60 seconds of an initial call for assistance. E.g. An office and a warehouse on the same site constitutes as 2 significant areas. Each area needs to be assessed on it's own merits. Sports clubs/facilities: we recommend one small kit on each floor.	1 LOW HAZARD - Office (e.g. shops, offices and all sports facilities).	2 Less than 25	3 At least one small kit
		25 - 50	At least one medium kit
		More than 50	At least one large kit
	1 HIGH HAZARD - Warehouse (e.g. light engineering and assembly work, food processing, warehousing, dangerous machinery, construction, harmful chemicals etc.).	2 Less than 5	3 At least one small kit
		5 - 25	At least one medium kit
		More than 25	At least one large kit

Workplace First Aid Kits

No matter how low-risk your workplace is, if you employ at least one person, you'll need a first aid kit on your premises per the Health and Safety (First-Aid) Regulations 1981. Find the ideal first aid kit here to suit your needs, whether a state-of-the-art BS8599-1 Workplace First Aid Kit or a cost-efficient HSE First Aid Kit.

Choose from large, medium, and small kits, hardshell boxes, or soft bags. Kit refills are also available for all our workplace first aid kit products, so you can keep them well-stocked without breaking the bank.

Scan the QR code or visit www.steroplast.co.uk/first-aid-products.html to view these products online.

What's the difference between HSE and British Standard?

HSE kits and British Standard kits are compliant with health and safety laws, but there are several differences between them, with British standard kits being improved to meet current hazards and risks.

Here are the main differences between them:

? HSE First Aid Kits

The standard guidance on first aid kits under the HSE has remained the same since 1981. The HSE provides some guidance on the type of items that should be in a first aid kit, but not the quantities.

HSE first aid kits are perfect as an entry-level kit and ideal for an office or low-hazard environment.

? British Standard First Aid Kits

BS8599-1 compliant kits have been expanded to meet modern hazards and rules. They include modern products and consider updated first aid practices. The BS8599-1 kits make first aid compliance easy and are **ideal for both low-risk and high-risk work environments.**

Premier BS8599-1 Workplace First Aid Kit

- Complies with UK Health and Safety laws, meeting BS8599-1 specifications
- Quick and easy access to contents with organised compartments and a placement diagram
- Includes Burnshield Hydrogel dressings for effective burn treatment
- Durable hard-shell Premier box protects contents from damage and keeps them dry
- Available with an industrial-strength wall-mounted bracket for easy installation
- Cost-effective refills available to maintain compliance and readiness

SKU	SIZE

Finger Dressing - Sterile
Foil Blanket
Gloves - Pairs
Guidance Leaflet
Large Dressing - Sterile
Medium Dressing - Sterile
Microporous Tape
Washproof Plasters
Resuscitate CPR Face Shield
Saline Sterile Wipes
Triangular Bandage
Tuff Cut Scissors
Wall Bracket

Item quantities vary based on size of kit

Includes hook-style wall bracket

BS8599-1 Workplace First Aid Kits

- Complies with BS8599-1, the British Standard for workplace first aid kits, ensuring high-level protection
- Suitable for both low and high-risk areas, covering a wide range of common workplace injuries
- Comes in a deluxe hard-shell green box with the signature white cross and 'first aid' label for easy identification
- Features an integrated carrying handle for quick and easy transport within the premises
- Cost-effective refills available to maintain compliance and readiness for any situation
- Kit storage box has no compartments, offering flexibility for larger items or customisation

Resuscitate Face Shield
TuffCut Scissors
Triangular Bandage
Wall Bracket
Safety Pins
Saline Wipes
Wound Dressing - Eye
Wound Dressing - Finger
Wound Dressing - Large
Wound Dressing - Medium

Item quantities vary based on size of kit

? Why do I need a wall bracket?

Installing a wall bracket for your first aid kit is crucial to ensure it is both **clearly visible** and **easily accessible**.

Whether it's in an office, warehouse, school, community centre, or sports facility, using a wall bracket to house your first aid kit ensures that it is both safe from harm and positioned where it can be most effective during a crisis.

First Aid Stations

First aid kits should be:

1. Easily accessible
2. Clearly visible
3. Signposted with a "first aid kit" sign above or nearby

Installing a first aid station makes your kit instantly visible, even from far away.

Choose from our single kit stations or combined all-in-one solutions to display multiple kits in your workplace.

Please note: First Aid Stations are NOT supplied with kits. Please purchase kits separately.

Scan the QR code or visit www.steroplast.co.uk/first-aid-products.html to view these products online.

Bandages & Wound Dressings

Our range of bandages and dressings provides essential wound care for workplace injuries, helping employers meet health and safety requirements. Designed for quick and effective treatment, these products support first aiders in treating cuts, grazes, and other injuries until further care is available.

With a focus on ease of use, durability, and comfort, they are a vital addition to any workplace first aid kit, ensuring employees receive prompt and reliable treatment when accidents happen.

Catering First Aid Kits & Supplies

Don't let high-pressure kitchen environments get in the way of safety

Includes

Who needs to use blue plasters?

Blue plasters are essential for anyone working in **catering, kitchens, canteens, or food preparation areas**. The bright blue colour makes them easily visible, reducing the risk of contamination in food, as blue is not a natural food colour.

Sterochef Blue Plasters

Our Sterochef Blue Plasters are metal detectable, which helps when using machinery or equipment with metal detection systems, adding another layer of safety. For any first aid kit in these environments, blue plasters are a must to ensure hygiene standards are maintained and to quickly identify and address any minor cuts or injuries without compromising food safety.

Don't risk a batch recall or putting your customers in danger.

Choose the most reliable blue plaster on the market.

Sterochef Blue Plasters

- Designed for sensitive skin, ensuring that they can be used by anyone without causing irritation
- Made to withstand frequent hand washing, maintaining their adhesion and protective barrier throughout a busy shift in food handling environments
- Equipped with superior medical-grade adhesive, Sterochef plasters stay securely in place, even in the demanding conditions of a food processing environment
- Metal-detectable with 100% aluminium foil (20µm), these plasters are easily detectable by safety equipment, reducing the risk of contamination in food production
- Fully compliant with the Food Safety (General Food Hygiene) Regulations 1995, making them the best choice for maintaining health and safety standards in food handling environments

Catering First Aid Kits

Catering first aid kits are designed to meet the specific needs of busy kitchen and food preparation environments. Along with the standard first aid essentials, such as bandages and antiseptic wipes, these kits also include specialised items like Burnshield® dressings.

Blue plasters are included for easy visibility in food prep areas, helping to maintain hygiene and safety.

Ideal for cafés, restaurants, bars, canteens, food vans and any workplace with food preparation areas.

Catering Plasters & Bandages

Our range of catering plasters and bandages is specially designed for kitchen environments, offering blue-coloured dressings that are ideal for treating common kitchen injuries

These include cuts, scrapes, and burns that often occur in food preparation areas. The blue colour ensures high visibility to prevent contamination, while the durable materials provide reliable protection and comfort.

These bandages and dressings are essential for keeping kitchen staff safe and maintaining hygiene standards during busy shifts.

Vehicle & Lone Worker First Aid

First aid responsibilities don't stop at the door to your premises

Provide your Off-Site Employees with First Aid Supplies

The Health and Safety (First-Aid) Regulations 1981 require employers to provide appropriate provisions if employees are taken ill or injured at work, including employees working off-site and in company vehicles.

The Approved Code of Practice (ACoP), which accompanies the regulations, details that employees should have first aid needs met wherever they work for the business, including away from main sites.

What is a lone worker?

The HSE defines a lone worker as ***“those who work by themselves without close or direct supervision”***.

Examples of lone workers in fixed establishments are:

- A person working alone in a small shop or petrol station
- People who work from home other than in low-risk, office-type work
- People working alone for long periods, e.g. in factories, warehouses, leisure centres or fairgrounds
- People working on their own outside normal hours, e.g. cleaners and security, maintenance, or repair staff

Examples of mobile workers working away from their fixed base are:

- Workers involved in construction, maintenance and repair, plant installation and cleaning work
- Agricultural and forestry workers
- Service workers, including postal staff, social workers, engineers, estate agents, and sales representatives visiting domestic and commercial premises

How to Choose the Correct Vehicle First Aid Kit:

If your company has vehicles you are also legally responsible to provide first aid kits for these too, the table below will help you with selecting the right kit:

Number of passengers	Vehicle examples	Number and size of first aid kits required
1 to 3	Mopeds, motorcycles, motortricycles and quadricycles	One small kit
1 to 8	Cars, taxis, commercial vehicles	One medium kit
1 to 16	Mini buses, small buses	One large kit
17+	Buses, coaches	Two large kits*

**Multi-level vehicles require at least two kits*

Travel & Vehicle First Aid Kits

Vehicle first aid kits are essential for ensuring the safety of staff who spend significant time on the road. Accidents and minor injuries can happen at any time, making it crucial to have the right supplies readily available.

Our vehicle first aid kits are specifically designed for use in cars, vans, and other work-related vehicles, providing the necessary equipment to handle common injuries while travelling.

AVAILABLE

MADE TO
BRITISH
STANDARDS

Compliant
with
BS8599-2:2019

The hard box option is ideal for work vans that regularly transport materials and hard objects.

The soft bag option is a good first aid kit for cars and other vehicles like taxis that need to conserve space.

Compliant
with
BS8599-2:2019

Protect Drivers & Passengers

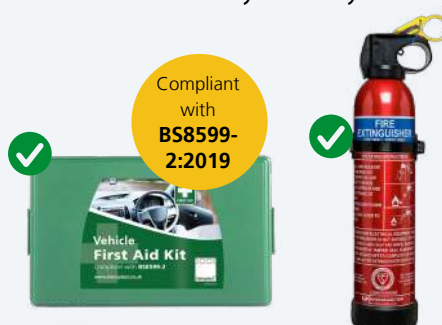

The Public Service Vehicles (Safety) Regulations 1981 require all public service vehicles, including taxis, minibuses, and public transport, to carry first aid kits. British standard BS8599-2:2019 provides guidance on the standard a vehicle first aid kit should uphold.

Do you drive a Public Service Vehicle?

If you drive a public service vehicle (PSV) such as a taxi, mini bus, or coach, **you are legally required to carry a first aid kit** on board for your and your passengers' safety.

Our BS8599-2 Vehicle First Aid Kit has been developed in accordance with British Standards guidance and provides everything required for complete legal compliance.

It's also a legal requirement that all PSVs carry a **fire extinguisher** on board.

Compliant
with
BS8599-2:2019

Basic Vehicle First Aid Kit Bag

Where should a Lone Worker First Aid Kit be supplied?

The Health and Safety Executive requires business owners to meet regulations of the Health and Safety at Work etc. Act and the Management of Health and Safety at Work Regulations sufficiently protect their workforce and others who interact with the business.

People are employed as lone workers in multiple different situations. **See if any of these apply to you or your staff:**

Working at Home Alone

Given that accidents can occur anywhere, even at home, a first aid kit is crucial for those working from home.

Volunteering

Volunteers often work in varying indoor or outdoor environments where they might face minor injuries.

Work at a Separate Base

In remote or hard-to-reach areas of a premises, having a kit allows for quick treatment, bridging the gap until help arrives.

Working at a Fixed Location Alone

In workplaces like shops or warehouses, where lone workers may encounter various risks, a first aid kit is essential. Provide equipment to treat a wide range of injuries, from minor cuts to severe wounds.

Work that Requires Staff to Travel

Traveling workers are often far from immediate help if an injury occurs. A portable first aid kit allows for immediate response to injuries, ensuring their safety on the move.

"You are responsible for the health, safety and welfare at work of all your workers, and this applies to any contractors, volunteers or self-employed people" — HSE.

Forestry Critical Injury First Aid Kit

Equip your arborists with our Forestry First Aid Kit, ideal for severe bleeding incidents. Designed for high-risk outdoor work environments like forestry, farming, and construction.

- The large kit is homed in a wipe-clean PVC bag with WaterStop® technology, ensuring the contents stay clean and dry under all condition
- Offers peace of mind by equipping workers with necessary tools to address both minor injuries and major trauma incidents
- Choose from medium or large depending on the quantity of people you expect to treat based on profession and number of employees

SKU	PRODUCT
6715	Large Forestry First Aid Kit
6714	Medium Forestry First Aid Kit

The medium size of this kit is supplied in a smaller orange nylon bag

Perfect for smaller teams working outdoors, offering a portable solution that's equipped to handle severe bleeding incidents on the go.

? What is the UK guidance on forestry worker safety?

In the UK, businesses must equip their workspaces with suitable first aid kits, with forestry work demanding a comprehensive risk assessment due to its isolated and perilous nature. When evaluating forestry work needs, consider:

- What are the specific threats, such as injuries from chainsaws, falls, or falling objects?
- Is the worker trained to self-administer first aid, especially in isolated locations?
- How can the worker communicate or signal for help if injured and alone, considering the remote nature of forest areas?

Failure to provide the appropriate first aid supplies and training can lead to fines or prosecution. Forestry workers, often working in challenging and isolated environments, are at a heightened risk of injury. It's essential to equip them with the necessary tools and knowledge to respond effectively to injuries, safeguarding their health.

Burns Supplies

Burns are a common risk for off-site workers. Quick, effective treatment is essential to minimise damage and discomfort when far from medical assistance.

Burncare First Aid

Deal with burns in the precious seconds that cause the most damage following an accident

Burns can be catastrophic and even fatal

Proper handling of a burn can significantly reduce healing time and complications afterwards, not to mention make the casualty feel more comfortable and calm. If your workplace operates machinery that generates heat, naked flames, ovens, hotplates, electric tools like soldering irons or hair straighteners, or risks exposure to certain chemicals, it's likely you need a burn kit.

Burns in the workplace could be caused by:

- Burns caused by direct heat (e.g. fire, steam, boiling water, molten metal)
- Chemical burns
- Radiological burns

! A burn or a scald is one of the UK's most common injuries that require emergency treatment.

The law requires you to assess risks and provide suitable equipment for your employees

That could include treatment for burns

If your workplace risk assessment determines the need for burncare supplies, then a burncare kit will help you comply with UK Health and Safety (First-Aid) Regulations 1981 as part of your wider first aid protection. Allowing you to provide staff with **adequate** and **appropriate** supplies as outlined in your risk assessment.

If you require a more comprehensive burncare solution, browse our full range of burncare kits, or check out our British Standard First Aid Kits (Page 11), which include burncare supplies in the contents.

In environments where there is a higher risk of burns (e.g., kitchens, manufacturing, or chemical handling), it would be considered good practice to have burn-specific first aid provisions, such as burn dressings or gels.

Risk Assessments		Company name	Task/operation being assessed		Date of assessment	For first aid products visit www.steroplast.co.uk		
Location		main production facility		ChemSafe Manufacturing Ltd.		21/10/2024		
Identify the hazard	Who could be harmed	Existing controls	Risk rating H/M/L	Further action to control risk	Risk rating H/M/L	Action by	Action when	Completed
Chemical burns, thermal burns	Employees handling chemicals & visitors	PPE, first aid training	High	signage, burncare kits	High	Health & safety manager	within a month	✓

Burncare Kits

Our burncare kits are essential for workplaces where there is a risk of burns from heat, chemicals, or hot equipment.

These kits are equipped with specialised dressings and treatments to provide immediate relief and protection for burn injuries. Designed to meet workplace safety standards, the kits help manage burns quickly and effectively, minimising the risk of infection and promoting recovery.

Suitable for a range of industries, they are a vital addition to any workplace first aid provision.

First Aid Kit, Eyewash Kit and
Burncare Kit Station
SKU: 1424

Burncare Stations

Employers are required to make first aid kits visible and accessible in their premises. Consider installing a burncare kit station to make sure you've got this covered.

Trauma First Aid

High-risk workplaces demand extra safety measures to keep lives safe

Deal with major bleeding and injuries that standard first aid kits aren't equipped to handle

If you operate premises with machinery, sharp and electronic tools, heavy movable objects, and working at height or in dangerous environments, it's highly likely you need to trauma first aid provisions.

Some industries that typically need trauma first aid provision include:

- Construction
- Mining
- Offshore
- Agriculture
- Deep Sea Fishing
- Waste Management

Bridging the Care Gap - *What happens before ambulances arrive?*

Our bleed control and trauma equipment give casualties the chance of survival when the care gap is their greatest enemy. The care gap is the time between injury occurrence and the arrival of professional medical assistance. When mass injury strikes like that of a natural disaster or terrorist attack, that's when the care gap is at its more threatening.

Equip your Venue for Martyn's Law

Following the Manchester Arena Attack, Martyn's Law will require certain organisations to better prepare for terrorist threats by training, planning, and supplying the right equipment for anyone to use in an emergency, when the care gap could be the thing that kills.

Taking effect in the near future, the new legislation sees businesses that operate public spaces required to put protective measures in place by law. Publicly Accessible Locations (PALs) with a capacity of 100 or over must adopt risk management activities and a preparedness plan, with those of below 100 capacity highly recommended to do so too.

Any business that operates on public premises must be fully equipped to handle a terrorist attack. Even if Martyn's Law doesn't apply to you, you'll never regret having bleed control and severe injury first aid measures in place. Ensure you have all the workplace first aid supplies your risk assessment requires, install a **Public Access Trauma Kit (page 42)**, and find exactly what you need here to ensure you're fully prepared for the worst.

Trauma Kits

All UK workplaces are required by law to provide staff with access to a first aid kit, including all the supplies needed to face potential risks. Workplaces like factories, warehouses, production lines, agriculture, and construction are environments we find often need a bleed control kit.

A public access bleeding control kit means not only staff are protected, but you're giving members of the public that use your business space the chance to save a life too. You never know when a crisis could strike. You'll never regret being prepared.

Trauma Bandages & Dressings

Supplement your trauma kits with additional bandages and dressings as per your risk assessment.

In high-risk workplaces, trauma bandages and dressings are essential for managing severe injuries such as deep cuts or heavy bleeding.

Designed for quick and efficient application, these products offer critical care in emergency situations, helping to control bleeding and stabilise wounds until further medical help arrives.

Featured on BBC's *The One Show*

On 3 September 2024, BBC's *The One Show* featured a segment about a partnership between Manchester City Council, CityCo, and Steroplast Healthcare, which saw hundreds of Public Access Trauma (PACT) Kits distributed across venues in Manchester's hospitality and entertainment sectors.

This initiative addresses the "care gap" – the crucial period between a serious incident, such as a terrorist attack, and the arrival of emergency services.

At the event, a Steroplast healthcare professional led a training session for venue staff, showing them how to use the PACT Kit's contents, including easy-to-use tourniquets and trauma dressings. The session demonstrated how even those without medical experience can effectively manage life-threatening injuries using the kit.

PACT Kit feature on *The One Show*

The Public Access Trauma Kit: Help Before Paramedics Arrive

As businesses across Manchester and beyond face increasing pressure to supply more safety measures in public venues, it's essential to begin preparing for forthcoming legislation that will soon require more robust security protocols for businesses.

Following several recent incidents where businesses were found unprepared, the urgency for effective emergency preparedness has never been clearer. While specific laws and policies are yet to be fully implemented, it's evident that compliance with new safety standards will soon be mandatory.

One proactive step businesses can take is investing in a PACT kit—developed by medical experts and recognised by emergency services—to ensure they are equipped to handle severe injuries in high-risk situations.

The PACT kit was developed by the National Counter Terrorism Security Office (NaCTSO) with critical input from medical experts and first aid professionals. On July 31st, Manchester City Council, in partnership with Steroplast Healthcare and CityCo, distributed hundreds of PACT kits across venues throughout the city as part of an initiative to address the care gap during emergencies.

As seen on
**BBC's
The One
Show**

Choose from three tourniquet types

We offer three variations of the PACT kit, supplied with different types of tourniquet for different levels of training:

S.T.A.T Tourniquet

Users with no prior experience/training

C-A-T Tourniquet

Users with some experience/training

SOF-T Tourniquet

Users with some experience/training

Childcare First Aid

Supervise children with complete confidence when you have the right first aid supplies

British childcare first aid kit requirements are stipulated by the UK Board of Education

Under the Early Years Foundation Stage (EFYS) Statutory Framework that covers children from birth to five years old, the paediatric first aid requirements for all organisations, businesses, or individuals who take care of young children advise that:

*'Providers must ensure there is a **first aid box** accessible at all times with **appropriate content for use with children**. Providers must keep a **written record of accidents or injuries and first aid treatment**.'*

Childcare First Aid Kit

Assorted Washproof Plasters

Accident Report Book

The first aid kit contents for childminders, nurseries and primary schools need to be suitable for minors, so choosing a specially designed paediatric first aid kit containing products appropriate to treat children is essential.

The EFYS guidelines also state that all early year childcare providers must:

- Make suitable first aid arrangements for off-site activities as well as the main premises.
- Ensure that at least one person with a current paediatric first aid (PFA) certificate is available at all times when children are present, including on outings.
- Childminders or any assistant in sole charge of children for any period should hold at current PFA.
- In the event of an injured child, a trained paediatric first aider and the necessary paediatric first aid kit contents must be accessible within 60 seconds.
- Where schools or childcare environments have more than one floor, you must have multiple kits—at least one on each floor.

Access to the right first aid kit contents for nursery and childcare environments and at home or school could save a life.

Childcare First Aid Kits

It's important to have a good idea of what paediatric first aid kit contents you should keep within reach in case of a child-related emergency.

Parents, teachers, and childminders should never underestimate the importance of having a paediatric first aid kit specially designed for treating children. Our children's first aid kits contain hypoallergenic items like plasters, designed to minimise the chance of an allergic reaction on sensitive skin.

Eyecare

Sterowash Eyecare Kit 2

Eyecare Kit

Children often experience minor eye issues, such as irritations or **foreign particles in the eye**, which can be quickly addressed with the right tools. Having an eyecare kit on hand enables schools to respond promptly to these situations, reducing discomfort and minimising disruptions to learning. It also helps to avoid unnecessary trips to healthcare facilities for minor issues, providing a practical solution for everyday eyecare needs.

Visit page 42
to learn about
PACT Kits

Public Access Trauma (PACT) Kit

Public Access Trauma (PACT) Kit

A Public Access Trauma Kit provides immediate assistance in emergencies, such as **severe injuries or accidents**, before medical professionals arrive.

These kits can help address critical situations like severe bleeding, which requires quick intervention to increase the chances of survival. Having a trauma kit on hand ensures that staff and bystanders are equipped with the necessary tools to provide basic but potentially life-saving care.

Catering

Catering First Aid Kit

Catering First Aid Kit

A Catering First Aid Kit is the perfect addition for school **canteens, food preparation areas**, and **certain lessons** where food is handled to ensure safe and efficient food handling.

It helps maintain hygiene standards, reducing the risk of contamination and food-borne illnesses. A catering kit also makes it easier for staff and students to access the right tools for various food-related activities, such as cooking lessons or special events.

Visit page 34
for all
Burncare

Steroburn Burns Kit

Burns First Aid Kit

A Burns First Aid Kit ensures school staff can respond quickly and effectively to incidents involving heat or chemical burns. **Classrooms, kitchens**, and **science labs** are environments where such accidents can happen, and having a specialised kit on hand means immediate treatment can begin before further medical help arrives.

These kits contain items like burn dressings and cooling gels, specifically designed to relieve pain and minimise injury.

Steroguard Biohazard Kit

Steroguard Biohazard Spill Kit

Biohazard Kit

All schools should consider having a biohazard kit on hand, as children are prone to accidents and illnesses that can result in **exposure to bodily fluids** like vomit, blood, urine, and faeces.

A Biohazard Kit ensures that staff can manage these situations promptly with proper PPE, reducing the risk of cross-contamination. The kit's ease of use and quick deployment make it an essential addition to any school's safety equipment.

Sterosafe Sharps Disposal Kit

Sharps Disposal Kit

A Sharps Disposal Kit ensures the **safe handling and disposal of needles and other sharp objects** that may be found on the premises.

This reduces the risk of injury and potential exposure to infections for students, staff, and visitors. Having a dedicated kit also ensures that any sharps can be handled promptly and correctly, maintaining a safer environment and complying with health and safety regulations.

Plasters & Bandages for Children

Our range of child-friendly plasters and bandages are designed with gentle materials and fun designs, helping to calm children while offering effective protection for cuts and grazes.

These products ensure that minor injuries are treated quickly and comfortably in environments where children's well-being is a priority. Hypoallergenic plasters designed by experts to be kind to sensitive skin and painless to remove. Choose from various designs, shapes, and sizes.

Scan the QR code or visit www.steroplast.co.uk/first-aid-products.html to view these products online.

Clear signage helps staff, students, and visitors quickly locate first aid kits, defibrillators, or designated first aid rooms, saving valuable time when someone is injured or unwell.

Eyecare First Aid

Deal with eye injuries and accidents fast and save someone's sight

Guidance on Eye First Aid

Supplying your staff with first aid provisions isn't enough to ensure they're ready when an accident occurs.

Thorough and ongoing training, with regular access to training materials is as important to ensure they are confident, prepared, and forthcoming with help if a teammate gets injured.

There's no limit to how much first aid training you need to provide or how many members of staff need first aid training, this will all depend on your risk assessment and how much you determine necessary.

However, **the HSE states that the minimum requirements of businesses are:**

- "An appointed person or people to take charge of first aid arrangements"
- "Information for all employees telling them about first aid arrangements"

While not all members of staff are likely to require formal first aid training, everyone should be aware of basic emergency procedures. This means that no matter who is present and who becomes injured, team members will have the fundamental training to help.

UK Regulations and Laws on Eye First Aid

All UK businesses have a duty of care under the Health and Safety (First-Aid) Regulations 1981 to provide access to first aid provisions and training that ensure all individuals who interact with the business are safe from harm.

The Management of Health and Safety at Work Regulations 1999 requires risk assessments to be carried out to determine precisely what measures need to be put in place.

Exactly where eyewash stations should be installed depends on the risks in the surrounding environment. Your risk assessment will tell you whether you need to install eye first aid supplies. If so, the HSE guidance on eyewash stations is:

"If mains tap water is not readily available for eye irritation, at least a litre of sterile water or saline (0.9% w/v) in sealed, disposable containers should be provided. Once the seal has been broken, the containers should not be kept for reuse. The container should not be used after the expiry date."

Eyecare Kits & Eyewash

Additional first aid supplies are required for eyecare in labs, catering and food handling environments, around machinery, and in workshops. If your business involves handling tools, materials, and machinery, uses open flames, steam, or ovens, or puts people at risk of exposure to chemicals, there's a heightened risk of eye injury.

Invest in an eyecare kit to keep on your premises and stay compliant. If someone gets debris or chemicals in their eye it must be flushed immediately. Give your staff a chance to save someone's sight with an eyecare kit.

Biohazards & Sharps

Handle biohazard spills and hazardous sharp objects the right way

Spilt bodily fluids pose a serious health risk if they're not cleaned up with a Biohazard Kit. Ensure you have one on hand when you need it

Body fluid spills (urine, faeces, blood, vomit, saliva, semen) are classed as biohazards and potentially infectious. They must be cleaned up in a certain way to ensure the biohazard is neutralised and people in the environment are kept safe.

Where can our biohazard kits be used?

Medical Environments

Biohazard spill kits play a crucial role in various healthcare settings, such as hospitals, clinics, dental surgeries, care homes, and veterinary practices. These kits are essential in maintaining a sterile environment and preventing cross-contamination between patients and healthcare workers.

Workplaces and Education

In workplaces like laboratories, schools, offices, and factories, safety is a primary concern. Biohazard kits provide an effective solution for potential biohazard spillages, ensuring rapid, safe, and sanitary clean-up, thus contributing to a safer, healthier work and learning environment.

Public Spaces

Public spaces like hospitality and entertainment venues, beauty salons, spas, sports facilities, and event spaces often see a high footfall and are, therefore, more prone to accidental spillages. Biohazard kits facilitate swift containment and clean-up of such spills, ensuring public safety.

Public Transport

Similarly, public transport systems, including buses, trains, boats, airports, and aeroplanes, which serve a large number of people daily, can also greatly benefit from these kits, preventing the spread of potentially harmful pathogens.

Adhere to waste disposal regulations from proper sharps waste disposal supplies to protect yourself and others

Sharps bins for healthcare, nursing, beauty, veterinary, and at-home use. Sharps disposal kits and bins should be used to safely dispose of objects like needles, razors, and pins, or face the risk of broken glass contaminated with body fluids so they don't tear clinical waste bags and cause potential infection or injury.

Biohazard Kits & Supplies

Workplaces that handle potentially infectious materials or bodily fluids must be equipped with appropriate biohazard kits and supplies.

These kits contain everything needed to manage and clean up hazardous spillages, protecting staff from exposure to harmful pathogens.

From absorbent powders to disposal bags, these supplies ensure that biohazards are contained and disposed of safely, following strict safety guidelines.

Sharps Disposal

Proper sharps disposal is critical in workplaces where needles, scalpels, or other sharp instruments are used. Our range of sharps kits, bins and accessories ensures safe handling and disposal, helping to reduce the risk of injury and maintain a hygienic workplace.

Accidental needle-stick injuries can pose serious health risks, making the need for secure, easy-to-use sharps disposal containers a priority.

All public-facing businesses should have access to a sharps disposal kit in order to comply with the UK's Health and Safety at Work Act (1974).

? Would you know how to dispose of drug-related litter safely?

Used syringes, needles, blades and other sharp items can pose a serious risk to your health through an infection. Surveys have shown that 70% of managers faced with drug-related litter such as syringes, needles and blades at work would have no idea how to dispose of them safely.

It is the manager's job to look after his/her staff by maintaining the highest standards of cleanliness and hygiene to be compliant with the Health & Safety at Work Act (1974).

Single Use Sharps Disposal Kit

- Safe disposal of syringes, needles, blades, and other sharp objects to prevent infection risks
- Fast-acting sporicidal disinfection spray kills 99.9999% of bacteria
- Includes vinyl gloves, tweezers, antibacterial wipe, sharps bin (0.08L), yellow disposal bag, and Steroclenz Rapid 50 spray
- Lightweight, easy-to-store kit for workplaces, addressing drug-related litter safely

SKU
8205

Kit Includes:

- x1 Vinyl Gloves

Defibrillators & Accessories

Using a defibrillator in under ten minutes is the only way to save someone in cardiac arrest

Protect your staff and the public

Cardiac arrest can strike anyone, anywhere, anytime, and when it does, you have just ten minutes to start using a defibrillator. This is the only way to save someone's life. The sooner you use one, the more likely the person will survive. With ambulances in the UK arriving on average within 15 minutes to category one emergencies, a casualty in cardiac arrest relies on people nearby to help them survive.

If you operate a business where employees are at **risk of electrical shocks** or one with **heightened exposure to individuals with heart complications**, you might already need to install a defibrillator. But the more defibrillators available for public use, the better chance everyone has if cardiac arrest occurs.

Responsible businesses install defibrillators in publicly accessible areas and register them with *The Circuit* so emergency call handlers can direct the call maker to the nearest one available.

Order your defibrillator today for complete peace of mind. We stock defibrillators with visual and audible prompts for use by untrained people.

Visit our

Defibrillator Online Buying Guide

Explore our Defibrillator Buying Guide to learn more about choosing the right defibrillator equipment.

? Fully or Semi-Automatic?

Fully-Automatic

- Analyses the heart's rhythm and automatically delivers a shock if needed, without requiring the user to press a button.
- Once the pads are applied to the person, the device will give clear voice prompts and decide if a shock is necessary. If so, it will automatically deliver the shock after warning the user to stand clear.
- These devices are extremely user-friendly, ideal for situations where the rescuer may be panicking or inexperienced.

Semi-Automatic

- Analyses the heart's rhythm and prompts the user to press a button to deliver the shock if necessary.
- After placing the pads on the patient, the device assesses the heart's rhythm and instructs the rescuer when to press a button to deliver the shock.
- This gives the rescuer more control over the process, which may be preferred by trained professionals or in scenarios where someone is following the prompts of a call handler.

Defibrillators & Accessories

Our defibrillators, suitable for both professionals and laypersons, are essential in various settings, including healthcare, public spaces, and emergency services.

They're user-friendly for public use in places like airports and schools, and come with necessary accessories and robust storage solutions like the DefibSafe cabinets for all environments.

Designed for immediate use, they also support paramedics upon arrival.

Health & Safety at Work

Health and Safety is a requirement by Law. But it does not need to be complicated, however it must be taken seriously if you are to meet your legal responsibilities and duties as an employer.

We have put together some hints and tips to help you unravel the complexities of health & safety at work.

These will help point out the precautions you need to take to meet your obligations.

Health & Safety Policy

A health & safety policy sets out:

- The business's approach to health and safety
- How health & safety will be managed
- Persons responsible for doing what and when

Begin by writing a statement of intent:

- Here you will demonstrate your commitment to health & safety at work
- Write your aims
- Detail names of staff and roles who will take responsibility for health & safety in the workplace
- Record what is currently in place

Plan how you will achieve your health & safety aims e.g.:

- Risk assessments
- Staff training
- Safety signs
- Equipment required

Sign & Review:

- The most senior person in the company must sign the health & safety policy and reviews are to take place regularly.

Every business with more than five employees must have a written health & safety policy.

It is not a requirement for businesses with less than five employees for this to be a written policy, but it is advisable to give clear guidance.

£21.6B

Annual costs of workplace injury and new cases of work related ill health in 2022/23.

Source: HSE Health and safety at work Summary statistics for Great Britain 2024

Understanding the Law

Criminal and Civil Law both apply to workplace health & safety. If you do not protect your employees and others from getting hurt or ill through work then regulators such as The Health & Safety Executive or your local authority could take action against you under **criminal law**. However, the person affected may also take action under **civil law** and make a claim for compensation.

Both of which can prove to be costly to a business, so it is extremely important you do all you can and have recorded evidence that you have correct procedures in place to protect your workforce and anyone visiting your premises.

The Health & Safety at Work Act 1974 (HSWA) is the main legislation, read this in detail visit www.legislation.gov.uk

What laws must businesses comply with?

	Purpose:	Applies to:	Implications:
The Health & Safety at Work act 1974	Requires employers to uphold a duty of care that ensures reasonable steps are taken to keep those who interact with the business (employees, customers, contractors, etc.) safe from harm.	• Employers • Employees • Self-employed people	Take steps to provide a safe working environment.
The Health and Safety (First-Aid) Regulations 1981	Require employers to take appropriate steps to ensure those who interact with the business can receive immediate attention if injured or taken ill.	• Employers	Take steps to ensure first aid supplies and training are in place to mitigate all health and safety risks present.
The Management of Health and Safety at Work Regulations 1999	Require employers to conduct risk assessments to determine workplace hazards and put measures in place to mitigate them.	• Employers • Self-employed people	Provide access to first aid supplies in response to hazards identified in risk assessments.
The Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR) 2013	Require employers to report major injuries, deaths, and dangerous occurrences in the workplace.	• Employers • Self-employed people	Keep records of workplace injuries and illnesses and report those relevant to RIDDOR.
The Regulatory Reform (Fire Safety) Order 2005	Provide minimum fire safety standards required in all non-domestic premises.	• Employers	Provide access to relevant fire safety and burncare supplies to handle fire-related injuries.

In short, if you own a business, you must:

- Have first aid supplies installed on your premises by law in the UK.
- Depending on your first aid risk assessment, Have the exact first aid supplies you need.
- Ensure first aid supplies are kept up-to-date and in good working condition.

Appoint a Competent Person

Carefully select a responsible, competent member of staff to help manage health & safety within your company.

No formal training is required but this person must be confident in recognising hazards and implementing procedures and controls to ensure the safety of staff and anybody visiting your company.

This can be outsourced to a health & safety consultant but it can be managed in-house if you have the right person to help you, after all you and your staff know your business best.

Information for Employers

Workplace First Aid Training

All of your employees must be given advice on how to work safely and reduce risk in the workplace, along with clear instructions.

Training also needs to be regularly assessed. Employees will need to know the hazards, risks and what measures are in place in your workplace. Plus employees are to be made aware of emergency procedures.

- New staff are to be given H&S advice and information during their induction.
- Health and safety representatives are to have regular training to keep up to date with any changes in regulations.
- This training must be provided free to employees and carried out during normal working hours.
- Your staff will need extra training for new equipment or changes in your working practices.
- Training records to be kept up-to-date and discuss health and safety training needs with your staff.

Workplace Facilities

It is the employer's responsibility to provide adequate welfare facilities and a healthy and safe working environment for everyone in the workplace, inclusive of those with disabilities.

This includes:

- The right number of toilets and hand wash basins
- Drinking water
- A rest room for somewhere to eat food
- The workplace must be clean
- The working environment must have a reasonable temperature with good ventilation
- Suitable seating, workspace and lighting must also be provided
- Equipment must be well maintained
- Floors and traffic routes to be kept clear
- Windows must easily be opened and kept clean

Insurance

As an employer, you will need to purchase employers' liability insurance.

This will provide cover should an employee claim compensation from you if they were to become ill or injured as a result of the work they do.

Are you covered?

Employer's liability insurance can be purchased from brokers, trade associations or direct with insurance companies and it must be with an authorised insurer of the FCA.

Report

By keeping records you will be able to respond to patterns of accidents and better manage risk in workplace.

All workplace injuries and near misses must be recorded. For work related diseases must also be reported and is a duty under RIDDOR (Reporting of Injuries, Diseases and Dangerous Occurrences Regulations).

Reports must be stored confidentially to protect employee's personal data.

More detailed information is available at www.hse.gov.uk.

You will also find templates for Safety Policy, Risk Assessments and what and how to report to RIDDOR.

Sources: HSE, British Safety Council, RIDDOR

! For businesses with 10 or more employees then you must keep an accident book as required by law

Accident Report Book

SKU: 9661

Risk Assessments

Managing health & safety within your business is controlling the risks in your workplace.

You will need to think about what could cause harm to your employees and all visitors to your business and then take reasonable steps to prevent that harm.

Risk assessments are required by law and records are to be kept and reviewed regularly. However, if you have less than five employees then you do not have to keep written records.

Risk assessments do not need to be complicated, they are designed so that you can implement sensible measures for the control of risks within your business. To begin, you will firstly need to...

STEP 1

Assess the risk

- Identify potential accidents and health risks by inspecting the workplace for hazards in activities, processes, and substances.
- Review past incidents and consult with staff for insights on hazards and risk controls.
- Also take into account operations such as cleaning, maintenance, noises, harmful substances, along with working at height, using machinery, trips and falls hazards.

STEP 2

Identify Hazards

- Determine who might be harmed by identified hazards and how, paying attention to vulnerable groups such as new staff or expectant mothers.
- Assess current risk controls, decide on necessary further actions, assign responsibilities, and set deadlines to ensure risks are effectively managed.

STEP 3

Control the risk

- Evaluate existing controls and determine whether risks can be eliminated or reduced.
- Implement necessary changes, such as process adjustments, equipment replacement, or issuing PPE.
- Ensuring actions are balanced against practicality and cost.

STEP 4

Record your findings

- For businesses with more than five employees, it is a legal requirement to document identified hazards, who might be harmed, and the measures in place to control risks.
- Ensure that this documentation is thorough and accessible for future reference and audits.

Risk assessment sample forms are available to download on our website: www.steroplast.co.uk/risk-assessment

STEP 5

Review

- Regularly review and update the controls in place to ensure they are effective, especially when introducing new equipment, staff, or if issues arise, such as accidents or feedback.
- This continuous evaluation helps in maintaining a safe working environment and adapting to any changes in the workplace.

Workplace-Specific Hazards

Specific workplace hazards require different types of first aid.

Below are the common types of workplace hazards that appear in risk assessments, and the supplies you need to safeguard against them.

Remember: every workplace is different. Rely on your risk assessment to determine your first aid needs.

	Includes	Hazards	First Aid Supplies
Hospitality & Entertainment	Hospitality Hotels Theatres Cinemas Retail	• Manual handling injuries • Slips, trips, and falls • Food safety issues • Exposure to hazardous substances • Fire hazards • Manual handling injuries • Slips, trips, and falls • Falls from heights	• Workplace First Aid Kits (Pages 10 - 17) • Catering First Aid Kits (Pages 26 - 29) • Burncare Kits (Pages 34 - 37) • Vehicle First Aid Kits (Pages 30 - 31)

Advanced Life Support

Premium supplies from one of the most trusted names in emergency care

Steroplast is a recognised brand in emergency and medical industries for keeping hospitals, the military, emergency services, and healthcare facilities in stock of high-spec equipment designed for professional use. We're relied on for everything from diagnostics and immobilisation equipment to injection and surgical instruments.

If you choose a supplier to rely on for critical care equipment, choose one trusted by the UK military, NHS, St John Ambulance & British Red Cross. We already help these organisations save lives with advanced life support equipment. We know what it takes to support vital services and key workers where mistakes can't be made.

We're positioned as your dedicated supplier, acting fast to support you in emergency care and life-support situations. Capabilities like fast shipping turnaround, stock reserves, and restocking and expiry date reminders mean we've got your back at all times. We're ready to be the support you need at a moment's notice, ensuring your operations stay sharp and responsive.

Not what you're looking for?

Our range of **Workplace First Aid** products starts on page 6.

ONLINE GUIDE

Scan the QR code to directly access our advanced life support selection and benefit from our expert advice and product insights, ensuring you get the most appropriate solutions for your advanced life support needs.

How our customers know we meet their needs

Our medical, emergency, and military customers must adhere to strict quality standards and assurances when choosing advanced life support suppliers. Our 30+ years of experience working alongside industry professionals means that we understand these expectations and ensure our product range meets them.

We fulfil the following quality markers when selecting products for our advanced life support range:

✓ ISO Certification

All manufacturing and distribution follow ISO 13485:2016 for medical device quality management, alongside compliance with MDD 93/42/EEC, EU MDR 2017/745, and UK Medical Device Regulations 2002.

✓ MHRA Approval and CE Mark

All products meet MHRA requirements and EU standards, with the full range CE marked for UK use.

✓ British Standards Compliance

Our first aid kits are made to meet British Standards to demonstrate high levels of safety, quality, and performance wherever possible.

✓ IP (Ingress Protection) Ratings

Our ALS equipment is designed for demanding environments, with IP-rated devices offering protection against dust, water, and general wear.

✓ Biocompatibility Testing

Materials in direct contact with consumers, such as dressings, plaster adhesive, and intravenous tubing, are tested for biocompatibility as often as possible to minimise the risk of adverse reactions.

✓ Clinical Evaluations and Trials

Although we don't directly carry out clinical trials, we do have clinical evaluations in place to demonstrate that there is sufficient evidence to verify the safety and performance of the device, including any benefits or claims made when the device is used as intended.

✓ Data Security and Compliance

ISO 13485 requirements support the confidentiality of patient and user information. Devices that collect or store patient data are GDPR compliant, and we supply equipment that supports our customers' data security needs where possible.

Premium ALS brands we supply:

Blizzard IFAK Emergency Blanket – Reflexcell™ Insulated

- Compact, individual-use emergency blanket designed for managing cold exposure and shock
- Reflexcell™ insulated construction traps air and reflects body heat for effective thermal retention
- Fast deployment with generous coverage

SKU
BLIZ011

Blizzard 2 Layer Active Range Survival Jacket

- Features Reflexcell™ technology for unparalleled warmth
- Features a draw-cord with a spring toggle for easy closure and adjustment
- Effective in a wide range of temperatures, down to -40°C, and maintains performance even when wet
- Less bulky compared to traditional insulating materials, yet provides substantial warmth
- The bright orange colour enhances visibility, aiding in rescue scenarios

SKU
BLIZ006

Blizzard 3 Layer Survival Bag

- Compact, lightweight, and versatile
- Perfect for emergency and outdoor use
- Made from a waterproof & windproof three-layer Reflexcell™ material
- Designed to be compatible with CT scans and X-rays, facilitating medical examinations without removal
- Boasts a 7.6 tog rating, providing thermal quality equivalent to a medium-weight regular sleeping bag

SKU
BLIZ004

Remember to regularly check the expiration of your defibrillator pads and batteries and replace them if needed.

Defibrillator batteries should be replaced every 2-5 years and pads every 2 years, or as per manufacturer's guidelines; ensure regular checks for expiry and functionality.

Diagnostic Equipment

Our advanced diagnostic equipment is essential for accurate patient assessments, ideal for emergency situations and routine check-ups alike.

Key products like digital blood pressure monitors and fingertip pulse oximeters are crucial for EMTs, paramedics, and GP clinics.

Hospitals rely on our comprehensive selection, including the Emerald, Sapphire & Topaz Aneroid Sphygmomanometers and various stethoscope models, to deliver thorough patient care.

Scan the QR code or visit www.steroplast.co.uk/advanced-life-support-equipment.html to view these products online.

Evacuation, Immobilisation & Patient Handling

Our evacuation and immobilisation gear, including chairs, stretchers, and more, is essential for safely moving casualties in emergencies.

Key products like the Prometheus Traction Splint and SAM Pelvic Sling II support EMS teams, while the Spencer Basket Stretcher and Ferno Scoop 65 EXL aid in rescue operations.

Facilities utilise our equipment, like the Banana Board, for ease in patient handling, prioritising durability, versatility, and comfort.

Injection & Infusion

We provide essential injection and infusion products such as needles, IV cannulas, and tourniquets to healthcare and emergency services.

Our range, vital for medication delivery and IV set-ups, includes specialised tools like bone injection guns and chest decompression needles for urgent care.

We focus on safety and efficiency with our products which are selected for their precise application and patient comfort. They are also integral in non-hospital settings like diabetes care, sports medicine, and cosmetic clinics.

Steroplast's Global Network: Delivery, Export, and Distribution

Efficient and secure delivery services

We aim to ensure prompt and secure delivery of your healthcare and medical supplies through trusted courier services, with efficient 1–2 working day delivery across the UK mainland. Delivery is free of charge on all website orders over £40 (excl. VAT).

For those near South Manchester, a free collection service from our warehouse is offered, with an option for contactless pickup. Please note, shipping to the Channel Islands, Shetland Islands, Hebrides, and other specified regions requires special arrangements due to extra fees and logistical complexities.

For additional services including early morning and Saturday delivery, please contact us directly.

From the UK, to 57 countries worldwide

Understanding the complexities of international regulations is the key to the dependable service customers turn to for peace of mind.

Export to Europe: As our main export region, we're acutely familiar with all key regulations you must meet for healthcare, pharmaceutical, and medical equipment exports to the EU.

Export to the USA: If you're a US distributor interested in getting FDA approval to supply our products in the US, we're ready to work with you.

Export to the rest of the world: Leveraging our 25 years of industry expertise, we collaborate closely with our US customers to ensure adherence to all necessary regulations for seamless, compliant international trade.

25% of our turnover comes from medical equipment exports to **57 countries** worldwide.

We help distributors build credibility at no extra cost

We are one of the leading suppliers for distributors of medical equipment, consumables & disposables. A partnership with Steroplast can help you increase revenue and build your brand into the one your clients go to whenever they need premium medical and emergency supplies.

Pharmaceutical Supplies

Did you know that Steroplast can supply all your pharmaceuticals and medicines?

You can now buy all your pharmaceuticals and medicines from one location, saving you time and money.

Steroplast stocks everything from GLS products to P-Meds and POM supplies.

POM - Prescription Only Medicines

Any medicine classified as a POM is restricted for use under medical supervision on a prescription only.

P lines - Pharmacy medicines

Medicines classified as "P" lines are restricted for use under the supervision of a pharmacist.

GSL - General Sales List products

Available for sale in general retail outlets (restricted by pack size). These items are considered safe for use without medical supervision.

We guarantee quality assurance and security screening

Our high quality and safety standards extend to everyone who has access to our products, and it's paramount that we uphold this responsibility to our clients.

Our quality system is fully compliant with the MHRA

Medicines and Healthcare products Regulatory Agency

Bleed Control Kit 102

Critical Injury Kit 103

KNIFE CRIME IS ON THE RISE

If you want to be
more prepared,
here's how...

Following a serious injury causing
severe blood loss —

you only have minutes!

That's why you must have a Critical Injury Kit or Bleed Control Kit.
Supplied with specialist dressings to treat traumatic wounds.

**Steroplast's "Bleed Control Kits" are specifically
designed to control and stop severe blood loss**

In the event of a stabbing or similar injury. The kit is equipped with
tried and tested products (see contents) that will enable you to
help save a friend, a colleague or loved one's life.

A life saver designed for anyone to use

Supplied with easy to follow instructions so that anyone can help
out in a crisis.

53,047

offences involving
knives or sharp
instruments between
2024 and 2025.

44%

of homicides involved
a knife or sharp
instrument as the
method of killing.

4%

increase in knife-
enabled crime
recorded by police
from 2023 to 2024.

4,986

recorded hospital
admissions in England
for sharp object assault
in the YE Mar 2024.

Source: Office for National Statistics (ONS), Crime in England and Wales bulletins for the years ending March 2024 and March 2025.

These kits contain three items specifically for severe blood loss caused by serious injuries:

- ✓ Tourniquet
- ✓ Haemostatic wound dressing
- ✓ Trauma dressing

They are meant for employees that are exposed to greater risk of serious injury.

"First aid" is just that

The first form of aid when someone gets injured! You can help someone who's injured while waiting for medical professionals to arrive on scene!

SKU: 1146

S.T.A.T. Tourniquet

- ✓ Timer starts counting once activated
- ✓ Rounded edges avoid skin cuts, less trauma to the patient
- ✓ No skin reactions – it's latex-free

SKU: 6830

Trauma Dressing

- ✓ Applies instant direct pressure
- ✓ Quickly stems major blood loss
- ✓ Quick to secure with Velcro fastening

Sterosport.co.uk – your ultimate destination for sports essentials

A division of Steroplast Healthcare

Exclusive bespoke pricing for all Sterosport members

Like other sports medical companies, we provide bespoke pricing with a dedicated account manager. **However, what sets us apart is the convenience we offer.** Once you've established your bespoke price list, you have the option to bypass the traditional quote requests.

Our website **sterosport.co.uk** grants direct access to your personalised prices through your online account, letting you place orders at your pace and price, directly online, whenever you choose.

Organisations that put their trust in us...

Trust is earned, and we've spent **over 30 years** building that trust through our parent company Steroplast Healthcare, and more recently through its sports division Sterosport.

We're proud to partner with and supply products to:

- ✓ Professional sports teams
- ✓ National Governing Bodies
- ✓ Community sports clubs, sports physiotherapists and a range of sports and leisure facilities.
