Survival Rate

Stops life threatening bleeding fast, the rapid action reduces blood loss

Fast and effective treatment saves lives

Hemorrhage and bleeding are the main causes of preventable deaths on the modern battlefield. Bleeding however, is not just a military problem. Trauma is the biggest cause of death to adults under the age of 40. Hemorrhage being responsible for 30-40% of all trauma deaths.

Celox is the solution to stop the bleeding fast

Celox haemostat products can stop life threatening situations using a chitosan formulation which isn't affected by the body's clotting system and generates no heat. The Celox granules work on the most challenging cases; hypothermic blood and blood that contains anticoagulants such as heparin. It is easily cleaned and removed when the

patient reaches surgery and because there are no minerals any residual chitosan material can be metabolised.

How it works?

Celox chitosan is created from refined shrimp shell. When it makes contact with fluid, chitosan absorbs it, swells and then forms an adhesive gel which then sticks to the tissue around the injury. Allergy tests show no reaction to the chitosan material. Celox does not actually interact with the body's clotting mechanism and is equally effective if the body's clotting mechanism is not working, because of the trauma it is under (hypothermia), or by the presence of anticoagulants in the blood.

Saving lives for over 10 years

Since 2006 Celox trauma products have been used to save the lives of soldiers

and civilians alike. There are now four products in the Celox range: Haemostatic granules, Pre-filled haemostatic c applicator, Z-Fold haemostatic gauze and the Z-Fold Celox Rapid. For more information on these individual products visit our website.
